

### MISSISSIPPI STATE DEPARTMENT OF HEALTH

## BUREAU OF PUBLIC WATER SUPPLY

# CALENDAR YEAR 2010 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

Town of Snow Lake Shores
Public Water Supply Name

|                     | List PWS ID #s for all Water Systems Covered by this CCR  |
|---------------------|---|
| The Formust b       | ederal Safe Drinking Water Act requires each <i>community</i> public water system to develop and distribute a consume ence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCF is mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.     |
| Please              | Answer the Following Questions Regarding the Consumer Confidence Report   |
|                     | Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)  |
|                     | Advertisement in local paper  On water bills  Other   |
|                     | Date customers were informed: 6 / 2 /2011   |
|                     | CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:  |
|                     | Date Mailed/Distributed: / /  |
| $\sqrt{X}$          | CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)  |
|                     | Name of Newspaper: Southern Advocate  |
|                     | Date Published: 6 / 2 /201 1  |
|                     | CCR was posted in public places. (Attach list of locations)   |
|                     | Date Posted: / /  |
|                     | CCR was posted on a publicly accessible internet site at the address: www   |
| <u>CERTI</u>        | FICATION  |
| consiste<br>Departm | certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in and manner identified above. I further certify that the information included in this CCR is true and correct and is next of Health, Bureau of Public Water Supply.  Salar September Mayor, Water Supply.  Fittle (President, Mayor, Swner, etc.) |
|                     | Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215<br>Phone: 601-576-7518  |

#### 2010 Annual Drinking Water Quality Report Town of Snow Lake PWS#: 0050003 May 2011

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you executed. Our constant goal is to provide you with a serie and dependence supply of thinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from a well drawing from the Ceffee Sand Aquifer.

The source water assessment has been completed for our public vater system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing definited information on how the susceptibility determinations were made has been furnished to our public vester system and is available for viewing upon request. The well for the Town of Show Lake has received a moderate ausceptibility ranking to contamination.

If you have any questions about this report or concerning your water utility, please contact William R. Briggs at 682.224.3050. We want our valued customers to be informed about their water utility. If you want to learn more, please attend the meetings scheduled for the first Monday of the month at 6:30 PM at the Snow Lake Community Center.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1. to December 31. 2010. In cases where monitoring wasn't required in 2010, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of entimals or from human activity, microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septia systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as satts and metals; which can be naturally occurring or result from under storm-water runoff, industrial, or domestic vestewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agricultura, under storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink. EPA prescribes regulations that limit the amount of oreain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL): The "Maximum Alfowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG). The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) — The highest level of a disinfectant allowed in drinking water. There is convincing avidence that addition of a disinfectant is necessary for control microbial contaminants.

Parts per million (ppm) or Milligrams per titer (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards: in an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for Several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Sefe Drinking Water Hotline or at http://www.epa.gov/safewater/fead, The Mississippt State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioective substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hottine at 1-800-426-4791

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosportdium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The Town of Snow Lake works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
